

The weekly Crop Progress survey, asks questions concerning the different stages of growth, condition, and development for various crops across the United States. Each State customizes their questionnaires as the crops progress throughout the growing season in each State. The questions asked are based on several factors (HQ required questions, historic trends, and current weather and growth trends) within each State. HQ required questions focus on program commodities for each State. The following listing contains all of the questions that will be used throughout the growing season across the United States. In the ROCIS submission system we have attached a typical questionnaire that shows that the weekly questionnaire takes approximately 10 minutes to complete.
