¹ Respondents will be LHD preparedness coordinators and/or local health officials (LHOs) from 385 small LHDs, 309 medium LHDs, and 125 large LHDs across 47 states. Hawaii and Rhode Island do not have LHDs; therefore, no respondents from those states are included in the sample. Florida also is not included in the sample, as all data collection instruments distributed to LHDs in Florida must receive pre-clearance review and approval from the state health department in an effort to reduce response burden.

² LHDs serving a population of less than 10,000 are excluded from the respondent stratified random sample, because they serve about 2% of the total U.S. population and they have limited staff, which may create undue response burden.
