

Socio-Economic Survey of Hired Captains and Crew in New England, Mid-Atlantic, South Atlantic and Gulf of Mexico Commercial Fisheries

FREQUENTLY ASKED QUESTIONS (FAQS)

What is the purpose of the survey?

This survey is an effort by the NOAA Fisheries Northeast and Southeast Fisheries Science Centers to assess the current social and economic conditions of commercial fishing crews (including hired captains) in the Northeast and Southeast States for which little is known. The survey is a follow-up to a study conducted in 2018/2019 and will allow for comparisons to determine how and why commercial crew working conditions may have changed over time.

Why does your participation matter?

We simply do not know much about the experiences of commercial fishing crew members and yet they are a critical part of the commercial fishing industry. The majority of economic and social information collected has focused on vessel owners. The results of this survey will not only help fisheries managers understand what is going on in crew members' lives but also the impacts of management decisions on commercial crew. Your participation is extremely valuable in helping improve and shape fishery management decisions.

What type of information is being collected?

Social and economic information will be collected from commercial crew who voluntarily participate in the survey. Examples of the information to be collected include: demographic information, job opportunities, job satisfaction, wage system calculations, and well-being.

Who are we asking to participate?

Survey participants include commercial crew in the Northeast and Southeast states. Since there is no database of registered crew, participants will be intercepted on the docks at major ports.

Who is conducting this survey?

NOAA Fisheries Northeast and Southeast Fisheries Science Centers are conducting this survey. We conduct applied economic and sociocultural research on the management of commercial and recreational fisheries. It is our commitment to perform independent, relevant and accessible research aimed at providing useful input to the decision-making process in fisheries management.

How long will this survey take?

The survey will take **approximately 15-20 minutes** to complete. However, times may vary.

How will I be sure my data is anonymous?

Data collected will be kept anonymous, will not be linked to specific individuals and will not be released for public use except in an aggregate statistical form. Participation or lack of participation in the survey will remain anonymous. All economic data will be aggregated into statistical form for all reports.
