All aircraft noise is far too loud, be it small planes, jumbo jets, helicopters, etc. One easy way to mitigate noise to people and animals on the ground is to require small planes and helicopters to fly at a minimum of 1000 feet above ground, and the larger aircraft to fly higher than they presently do. Thank you.

Answer: This comment from a private citizen raises concerns regarding aircraft noise and proposes ways to address operational impact. This comment is outside the scope of this notice.
