S-STEM: Number of Respondents, Frequency of Response, and Annual Hour Burden

The estimated average number of annual respondents is 640, with an estimated average annual response burden of 4,480 hours. The frequency of response is an average of two times per year.

Respondents are award PIs. There is an average of 640 active awards each year, with 640 total PIs (1 per award) and an average of 20 scholars per award. PIs must report on each student receiving S-STEM scholarship support for each academic term, for an average of two responses per year per PI. Because of the nature of the project, PIs will have most of the data on scholars readily available and will need to spend an average of only 10 minutes per academic term entering data on each scholar, for a total annual burden of approximately 3.5 hours per PI.

The burden estimate is outlined below:

Respondent Type	Estimated Average Annual No. of Respondents	Estimated Average Annual Burden Hours Per Respondent	Responses Per Year	Estimated Annual Burden Hour Total
PIs	640	1.75	2	2,240
Total	640			2,240

S-STEM: Hour Burden Estimates by Each Form and Aggregate Hour Burdens

There is only one form. As mentioned above, respondents will be project PIs. The estimated total annual response burden is 4,480 hours. Burden is minimized by the fact that the Web-based screens request data in simple data entry fields, including radio buttons, dropdown menus, and text boxes, so little if any time is required for familiarization with the system. In addition, respondents can use an offline version of the survey to upload their data, allowing them to sort their data by student or academic term and cut and paste repeating data. The annual burden by form was calculated as follows:

Form Type	Respondent Type	No. of Respondents	Burden Hours Per Respondent	Responses Per Year	Total Burden Hours
S-STEM data collection form	PIs	640	1.75	2	2,240
Total		640			2,240

S-STEM: Estimates of Annualized Cost to Respondents for the Hour Burdens

The overall annualized cost to the respondents is estimated to be \$237,440. The following table shows the annualized estimates of costs to PI respondents, who are generally university professors. The estimated hourly rate is based on a report from the American Association of University Professors, “The Annual Report on the Economic Status of the Profession, 2020-2021,” Survey Report Table 1. According to this [report](#), the average salary across all academic ranks and across all types of doctoral-granting institutions (public, private-independent, religiously affiliated) was \$109,428. When divided by the number of standard annual work hours (2,080), this calculates to approximately \$53 per hour.

Type of Respondent	No. of Respondents	Burden Hours Per Respondent	Responses Per Year	Average Hourly Rate	Estimated Annual Cost
PIs	640	1.75	2	\$53	\$237,440
Total	640				\$237,440

S-STEM: Estimates of Costs to the Federal Government

Computing the annualized cost to NSF for the S-STEM data collection was done by taking the projected budget for the next three years and calculating the cost for each of the following operational activities involved in producing, maintaining, and conducting the data collection:

Operational Activities	Cost Over Three Years
System Development (includes initial development of the database and Web-based application, and later changes requested by the program, e.g., increased reporting tools, additional validations)	\$159,816
System Maintenance, Updates, and Technical Support (the system requires updates each year before opening the collection; maintenance is required to keep the system current with technology, e.g., database servers, operating systems)	\$287,669
Data Collection Opening and Support (e.g., online and telephone support to respondents and contacting respondents to encourage completion of the questions), Reporting (as defined by DUE), and Follow-up Activities (e.g., providing data to other consultants)	\$191,779
Three-Year Total for All Operational Activities	\$639,264

The annualized cost was computed as one-third of the total three-year cost; thus, the annualized cost to NSF for the S-STEM data collection is \$213,088.
